

**NB** In and after the 2004 diet of examinations, the total number of marks for the Higher Mathematics examination will increase from 110 to 130. There will be NO other changes to the format of the examination.

To provide guidance to Centres on how the 20 additional marks will be allocated, additional pages have been added to the following 2003 Marking Instructions to show how an additional 20 marks could have been allocated to the 2003 examination.

### Notes to the marking scheme for Higher Mathematics 2003

1. Illustrations where additional marks could be added to bring the overall total up to 130 are shown as follows:

Paper 1 extra marks are shown on pages 21-22 of the paper 1 m/s.

Paper 2 extra marks are shown on pages 21-22 of the paper 2 m/s.

2. Legend for the coding at the beginning of each marking scheme:

<b>1</b>	<b>2.1.1, 2.1.3</b>	<b>CN</b>	<b>C</b>	<b>03/101</b>
question	syllabus code(s)	calculator neutral	level	catalogue no.
		NC non-calculator		
		C calculator required		

1. Marks must be assigned in accordance with these marking instructions. In principle, marks are awarded for what is correct, rather than marks deducted for what is wrong.
2. Award one mark for each 'bullet' point. Each error should be underlined in RED at the point in the working where it first occurs, and not at any subsequent stage of the working.
3. The working subsequent to an error must be followed through by the marker with possible full marks for the subsequent working, provided that the difficulty involved is approximately similar. Where, subsequent to an error, the working is eased, a deduction(s) of mark(s) should be made.  
This may happen where a question is divided into parts. In fact, failure to even answer an earlier section does not preclude a candidate from assuming the result of that section and obtaining full marks for a later section.
4. Correct working should be ticked (✓). This is essential for later stages of the SQA procedures. Where working subsequent to an error(s) is correct and scores marks, it should be marked with a crossed tick (✗). In appropriate cases attention may be directed to work which is not quite correct (e.g. bad form) but which has not been penalised, by underlining with a dotted or wavy line.  
Work which is correct but inadequate to score any marks should be corrected with a double cross tick (✗✗).
5.
  - The total mark for each section of a question should be entered in red in the **outer** right hand margin, opposite the end of the working concerned.
  - Only the mark should be written, **not** a fraction of the possible marks.
  - These marks should correspond to those on the question paper and these instructions.
6. It is of great importance that the utmost care should be exercised in adding up the marks. Where appropriate, all summations for totals and grand totals must be carefully checked.  
Where a candidate has scored zero marks for any question attempted, "0" should be shown against the answer.
7. As indicated on the front of the question paper, full credit should only be given where the solution contains appropriate working. Accept answers arrived at by inspection or mentally where it is possible for the answer so to have been obtained. Situations where you may accept such working will be indicated in the marking instructions.

cont/

8. Do not penalise:
  - working subsequent to a correct answer
  - omission of units
  - bad form
  - legitimate variations in numerical answers
  - correct working in the “wrong” part of a question
9. No piece of work should be scored through - even where a fundamental misunderstanding is apparent early in the answer. Reference should always be made to the marking scheme - answers which are widely off-beam are unlikely to include anything of relevance but in the vast majority of cases candidates still have the opportunity of gaining the odd mark or two provided it satisfies the criteria for the mark(s).
10. If in doubt between two marks, give an intermediate mark, but without fractions. When in doubt between consecutive numbers, give the higher mark.
11. In cases of difficulty covered neither in detail nor in principle in the Instructions, attention may be directed to the assessment of particular answers by making a referral to the P.A. Please see the general instructions for P.A. referrals.
12. No marks should be deducted at this stage for careless or badly arranged work. In cases where the writing or arrangement is very bad, a note may be made on the upper left-hand corner of the front cover of the script.
- 13 **Do not write any comments on the scripts.** A summary of acceptable notation is given on page 4.

### Summary

Throughout the examination procedures many scripts are remarked. It is essential that markers follow common procedures:

- 1 **Tick** correct working.
- 2 Put a mark in the **right-hand margin to match the marks allocations on the question paper.**
- 3 Do **not** write marks as fractions.
- 4 Put each mark **at the end** of the candidate’s response to the question.
- 5 **Follow through** errors to see if candidates can score marks subsequent to the error.
- 6 Do **not** write any comments on the scripts.

# Higher Mathematics : A Guide to Standard Signs and Abbreviations

**Remember - No comments on the scripts. Please use the following and nothing else.**

## Signs

✓	The tick. You are not expected to tick every line but of course you must check through the whole of a response.	Marks being allotted e.g. (•) would not normally be shown on scripts		
✗	The cross and underline. Underline an error and place a cross at the end of the line.	$\frac{dy}{dx} = 4x - 7$ ✓ • $4x - 7 = 0$ ✗ $x = \frac{7}{4}$ ✗ • $y = 3\frac{7}{8}$ ✗ •		2
✗	The tick-cross. Use this to show correct work where you are <b>following through</b> subsequent to an error.	$C = (1, -1)$ ✗ $m = \frac{3 - (-1)}{4 - 1}$ ✗ • follow through $m_{rad} = \frac{4}{3}$ ✗ • $m_{igt} = \frac{-1}{\frac{4}{3}}$ ✗ • $m_{igt} = -\frac{3}{4}$ ✗ • $y - 3 = -\frac{3}{4}(x - 2)$ ✗ •		3
⋈	The double cross-tick. Use this to show correct work but which is inadequate to score any marks.	$x^2 - 3x = 28$ ✓ • $x = 7$ ⋈ ✗		1
˜	The tilde. Use this to indicate a minor transgression which is not being penalised (such as bad form).	$\sin(x) = 0.75 = \text{inv}\sin(0.75) = 48.6^\circ$ ˜ ✓ •		1
E	Eased. Where working is found correct whilst following through subsequent to an error, the working has been eased sufficiently for a mark not to be awarded.	$\log_3(x - 2) = 1$ ✗ $(x - 2) = 3^1$ ✗ • $x - 2 = 3$ ✗ • $x = 5$ ✗ E		1
BOD	Benefit of Doubt. Use this where you have to decide between two consecutive marks and award the higher.			

All of these are to help us be more consistent and accurate.

It goes without saying that however accurate you are in marking, it is to no avail unless you have added the marks up correctly. Please double check totals!!

Give 1 mark for each •	Illustrations for awarding each •
<b>Additional marks in Paper 1</b>	
<b>Question 1 +1</b> • <sup>1</sup> ic : rearrange in standard form • <sup>2</sup> ic : interpret gradient from linear equ. • <sup>3</sup> ic : find perp. gradient • <sup>4</sup> ic : state equation of line	• <sup>1</sup> $y = -4x + 1$ • <sup>2</sup> $m = -4$ • <sup>3</sup> $m_{\text{perp}} = \frac{1}{4}$ • <sup>4</sup> $y - 3 = \frac{1}{4}(x - (-1))$
<b>Question 2 +1</b> • <sup>1</sup> ic : start to complete square • <sup>2</sup> pd : finish completing the square  • <sup>3</sup> ic : sketch • <sup>4</sup> ic : sketch • <sup>5</sup> ic : sketch	• <sup>1</sup> $(x + 3)^2$ • <sup>2</sup> $+2$  • <sup>3</sup> <i>U-shaped parabola</i> • <sup>4</sup> <i>minimum at <math>(-3, 2)</math></i> • <sup>5</sup> <i>intercept on y-axis at <math>(0, 11)</math></i>
<b>Question 3 +1</b> • <sup>1</sup> ic : interpret unit vectors • <sup>2</sup> ss : know to use scalar product and get zero • <sup>3</sup> pd : process	• <sup>1</sup> $\begin{pmatrix} 3 \\ 2 \\ 0 \end{pmatrix}$ and $\begin{pmatrix} 2 \\ -3 \\ 4 \end{pmatrix}$ • <sup>2</sup> for perpendicularity " $u.v$ " = 0 • <sup>3</sup> $\begin{pmatrix} 3 \\ 2 \\ 0 \end{pmatrix} \cdot \begin{pmatrix} 2 \\ -3 \\ 4 \end{pmatrix} = 6 - 6 + 0 = 0$
<b>Question 4 +1</b> • <sup>1</sup> ss : e.g. form two equations in $p$ and $q$ • <sup>2</sup> pd : process  • <sup>3</sup> ic : state the condition for limit to exist • <sup>4</sup> ss : algebraic strategy for limit • <sup>5</sup> pd : process limit	• <sup>1</sup> $15 = 12p + q, 16 = 15p + q$ • <sup>2</sup> $p = \frac{1}{3}, q = 11$ • <sup>3</sup> since $-1 < \frac{1}{3} < 1$ , limit exists • <sup>4</sup> e.g. $L = \frac{1}{3}L + 11$ • <sup>5</sup> $L = 16\frac{1}{2}$
<b>Question 5 +1</b>  • <sup>1</sup> pd : express in standard form • <sup>2</sup> pd : express in standard form • <sup>3</sup> pd : differentiate fractional index • <sup>4</sup> pd : differentiate negative index • <sup>5</sup> pd : evaluation • <sup>6</sup> pd : evaluation	• <sup>1</sup> $x^{\frac{1}{2}}$ • <sup>2</sup> $2x^{-2}$ • <sup>3</sup> $\frac{1}{2}x^{-\frac{1}{2}}$ • <sup>4</sup> $-4x^{-3}$ • <sup>5</sup> $\frac{1}{2} \times 4^{-\frac{1}{2}} = \frac{1}{4}$ or $-4 \times 4^{-3} = -\frac{1}{16}$ • <sup>6</sup> $\frac{3}{16}$

	<p><b>Increase in marks for Paper 1 = 9</b>  <b>Increase in marks for Paper 2 = 11</b>  <b>Total increase in marks = 20.</b></p> <p><b>For 2004 the marks will allocated as follows:</b>  <b>Paper 1 60</b>  <b>Paper 2 70</b>  <b>Total 130</b></p>	

1. Marks must be assigned in accordance with these marking instructions. In principle, marks are awarded for what is correct, rather than marks deducted for what is wrong.
2. Award one mark for each 'bullet' point. Each error should be underlined in RED at the point in the working where it first occurs, and not at any subsequent stage of the working.
3. The working subsequent to an error must be followed through by the marker with possible full marks for the subsequent working, provided that the difficulty involved is approximately similar. Where, subsequent to an error, the working is eased, a deduction(s) of mark(s) should be made.  
This may happen where a question is divided into parts. In fact, failure to even answer an earlier section does not preclude a candidate from assuming the result of that section and obtaining full marks for a later section.
4. Correct working should be ticked (✓). This is essential for later stages of the SQA procedures. Where working subsequent to an error(s) is correct and scores marks, it should be marked with a crossed tick (✗). In appropriate cases attention may be directed to work which is not quite correct (e.g. bad form) but which has not been penalised, by underlining with a dotted or wavy line.  
Work which is correct but inadequate to score any marks should be corrected with a double cross tick (✗✗).
5.
  - The total mark for each section of a question should be entered in red in the **outer** right hand margin, opposite the end of the working concerned.
  - Only the mark should be written, **not** a fraction of the possible marks.
  - These marks should correspond to those on the question paper and these instructions.
6. It is of great importance that the utmost care should be exercised in adding up the marks. Where appropriate, all summations for totals and grand totals must be carefully checked.  
Where a candidate has scored zero marks for any question attempted, "0" should be shown against the answer.
7. As indicated on the front of the question paper, full credit should only be given where the solution contains appropriate working. Accept answers arrived at by inspection or mentally where it is possible for the answer so to have been obtained. Situations where you may accept such working will be indicated in the marking instructions.

cont/

8. Do not penalise:
  - working subsequent to a correct answer
  - omission of units
  - bad form
  - legitimate variations in numerical answers
  - correct working in the “wrong” part of a question
9. No piece of work should be scored through - even where a fundamental misunderstanding is apparent early in the answer. Reference should always be made to the marking scheme - answers which are widely off-beam are unlikely to include anything of relevance but in the vast majority of cases candidates still have the opportunity of gaining the odd mark or two provided it satisfies the criteria for the mark(s).
10. If in doubt between two marks, give an intermediate mark, but without fractions. When in doubt between consecutive numbers, give the higher mark.
11. In cases of difficulty covered neither in detail nor in principle in the Instructions, attention may be directed to the assessment of particular answers by making a referral to the P.A. Please see the general instructions for P.A. referrals.
12. No marks should be deducted at this stage for careless or badly arranged work. In cases where the writing or arrangement is very bad, a note may be made on the upper left-hand corner of the front cover of the script.
- 13 **Do not write any comments on the scripts.** A summary of acceptable notation is given on page 4.

### Summary

Throughout the examination procedures many scripts are remarked. It is essential that markers follow common procedures:

- 1 **Tick** correct working.
- 2 Put a mark in the **right-hand margin to match the marks allocations on the question paper.**
- 3 Do **not** write marks as fractions.
- 4 Put each mark **at the end** of the candidate’s response to the question.
- 5 **Follow through** errors to see if candidates can score marks subsequent to the error.
- 6 Do **not** write any comments on the scripts.

# Higher Mathematics : A Guide to Standard Signs and Abbreviations

**Remember - No comments on the scripts. Please use the following and nothing else.**

## Signs

✓	The tick. You are not expected to tick every line but of course you must check through the whole of a response.	Marks being allotted e.g. (•) would not normally be shown on scripts		
✗	The cross and underline. Underline an error and place a cross at the end of the line.	$\frac{dy}{dx} = 4x - 7$ ✓ • $4x - 7 = 0$ ✗ $x = \frac{7}{4}$ ✗ • $y = 3\frac{7}{8}$ ✗ •		2
✗	The tick-cross. Use this to show correct work where you are <b>following through</b> subsequent to an error.	$C = (1, -1)$ ✗ $m = \frac{3 - (-1)}{4 - 1}$ ✗ • follow through $m_{rad} = \frac{4}{3}$ ✗ • $m_{igt} = \frac{-1}{\frac{4}{3}}$ ✗ • $m_{igt} = -\frac{3}{4}$ ✗ • $y - 3 = -\frac{3}{4}(x - 2)$ ✗ •		3
⋈	The double cross-tick. Use this to show correct work but which is inadequate to score any marks.	$x^2 - 3x = 28$ ✓ • $x = 7$ ⋈ ✗		1
˜	The tilde. Use this to indicate a minor transgression which is not being penalised (such as bad form).	$\sin(x) = 0.75 = \text{inv sin}(0.75) = 48.6^\circ$ ˜ ✓ •		1
E	Eased. Where working is found correct whilst following through subsequent to an error, the working has been eased sufficiently for a mark not to be awarded.	$\log_3(x - 2) = 1$ ✗ $(x - 2) = 3^1$ ✗ • $x - 2 = 3$ ✗ • $x = 5$ ✗ E		1
BOD	Benefit of Doubt. Use this where you have to decide between two consecutive marks and award the higher.			

All of these are to help us be more consistent and accurate.

It goes without saying that however accurate you are in marking, it is to no avail unless you have added the marks up correctly. Please double check totals!!

<b>Question 3 +1</b> • <sup>1</sup> ss : area = $\int$ upper function – lower function • <sup>2</sup> ic : interpret diagram for limits • <sup>3</sup> pd : simplify prior to integration • <sup>4</sup> pd : integrate • <sup>5</sup> ic : interpret the limits • <sup>6</sup> pd : evaluate using limits	• <sup>1</sup> $\int ((x^2 + 2x) - (x^3 - x^2 - 6x)) dx$ stated, or implied by • <sup>3</sup> • <sup>2</sup> $\int_0^4 \dots\dots$ • <sup>3</sup> $\int (8x + 2x^2 - x^3) dx$ • <sup>4</sup> $[4x^2 + \frac{2}{3}x^3 - \frac{1}{4}x^4]_0^4$ • <sup>5</sup> $(4 \times 4^2 + \frac{2}{3} \times 4^3 - \frac{1}{4} \times 4^4) - 0$ • <sup>6</sup> $42\frac{2}{3}$
<b>Question 4 +1</b> • <sup>1</sup> ss : know to differentiate • <sup>2</sup> pd : differentiate • <sup>3</sup> pd : differentiate • <sup>4</sup> pd : evaluate gradient • <sup>5</sup> pd : evaluate y-coordinate • <sup>6</sup> ic : state equation of line	• <sup>1</sup> $\frac{dy}{dx} =$ • <sup>2</sup> any 2 terms from $3x^2 + 4x - 3$ • <sup>3</sup> $\frac{dy}{dx} = 3x^2 + 4x - 3$ • <sup>4</sup> $m = \frac{dy}{dx}_{x=1} = 4$ gradient stated or implied by • <sup>6</sup> • <sup>5</sup> $y_{x=1} = 2$ • <sup>6</sup> $y - 2 = 4(x - 1)$
<b>Question 5 +1</b> • <sup>1</sup> ic : interpret $f(-x)$ • <sup>2</sup> ic : communication • <sup>3</sup> ic : communication • <sup>4</sup> ic : interpret $2f$ • <sup>5</sup> ic : communication	• <sup>1</sup> refl. in $y$ – axis • <sup>2</sup> annotate any two from $(0, -3), (4, 2), (3, 0), (-1, 0)$ • <sup>3</sup> annotate remaining two • <sup>4</sup> a scaling & $(3, 0), (-1, 0)$ • <sup>5</sup> annotate $(0, -6), (4, 4)$

	Give 1 mark for each •	Illustrations for awarding each •
	<b>Question 6 +1</b> <ul style="list-style-type: none"> <li>•<sup>1</sup> pd : differentiate compound trig</li> <li>•<sup>2</sup> pd : differentiate compound trig</li> <li>•<sup>3</sup> ic : interpret</li> <li>•<sup>4</sup> pd : evaluate derivative</li> <li>•<sup>5</sup> pd : evaluate derivative</li> </ul>	<ul style="list-style-type: none"> <li>•<sup>1</sup> <math>f'(x) = -2 \sin(2x) + \dots</math></li> <li>•<sup>2</sup> <math>\dots -12 \cos(4x)</math></li> <li>•<sup>3</sup> <math>f'(\frac{\pi}{6}) = -2 \sin(\frac{2\pi}{6}) - 12 \cos(\frac{4\pi}{6})</math></li> <li>•<sup>4</sup> <math>-2 \sin(\frac{2\pi}{6}) = -\sqrt{3}</math></li> <li>•<sup>5</sup> <math>-12 \cos(\frac{4\pi}{6}) = 6</math></li> </ul>
	<b>Question 8 +2</b> <ul style="list-style-type: none"> <li>•<sup>1</sup> ss : identify crucial aspect</li> <li>•<sup>2</sup> ic : start proof</li> <li>•<sup>3</sup> ic : complete proof</li> <li>•<sup>4</sup> ss : know to differentiate</li> <li>•<sup>5</sup> ss : know to set derivative to zero</li> <li>•<sup>6</sup> pd : express in standard form</li> <li>•<sup>7</sup> pd : differentiate</li> <li>•<sup>8</sup> pd : start to solve</li> <li>•<sup>9</sup> pd : solve</li> <li>•<sup>10</sup> ic : justify minimum</li> </ul>	<ul style="list-style-type: none"> <li>•<sup>1</sup> <math>length = \frac{108000}{\frac{1}{2}x^2}</math></li> <li>•<sup>2</sup> <math>SA = 2 \times \frac{1}{2}x^2 + 2x \times length</math></li> <li>•<sup>3</sup> <math>\dots SA = x^2 + \frac{432000}{x}</math></li> <li>•<sup>4</sup> <math>\frac{dA}{dx} = \dots</math></li> <li>•<sup>5</sup> <math>\frac{dA}{dx} = 0</math></li> <li>•<sup>6</sup> <math>432000x^{-1}</math></li> <li>•<sup>7</sup> <math>2x - 432000x^{-2}</math></li> <li>•<sup>8</sup> <math>2x = \frac{432000}{x^2}</math></li> <li>•<sup>9</sup> <math>x = 60</math></li> <li>•<sup>10</sup> e.g. nature table</li> </ul>
	<b>Question 9 +1</b> <ul style="list-style-type: none"> <li>•<sup>1</sup> ss : use distributive law</li> <li>•<sup>2</sup> pd : expand scalar product</li> <li>•<sup>3</sup> pd : expand scalar product</li> <li>•<sup>4</sup> ic : substitution</li> <li>•<sup>5</sup> pd : complete calculations</li> </ul>	<ul style="list-style-type: none"> <li>•<sup>1</sup> <math>a.(a+b) = a.a + a.b</math></li> <li>•<sup>2</sup> <math>a.b = 5 \times 4 \cos(\theta)</math></li> <li>•<sup>3</sup> <math>a.a = 5^2</math></li> <li>•<sup>4</sup> <math>20 \cos(\theta) = 11</math></li> <li>•<sup>5</sup> <math>\theta = 56.6^\circ</math></li> </ul>
	<p><b>Increase in marks for Paper 1 = 9</b>  <b>Increase in marks for Paper 2 = 11</b>  <b>Total increase in marks = 20.</b></p> <p><b>For 2004 the marks will allocated as follows:</b>  <b>Paper 1 60</b>  <b>Paper 2 70</b>  <b>Total 130</b></p>
